

EUROCOPTER H145

As the quietest helicopter in its class, the twin-engine IFR H145 offers an unprecedented level of performance with its upgraded main and tail rotor systems.

The H145 is the only helicopter in its category to combine a roomy cabin and excellent window visibility, providing exceptional passenger comfort. This aircraft offers high rotor clearance and large luggage clamshell doors, and extra-thick interior insulation and special flooring that damps out any residual vibration.

The H145, with its sporty yet elegant atmosphere, invites up to 9 passengers onboard in individual seats via large sliding doors that provide easy cabin access.

With its low noise and vibration levels, corporate and private helicopter users alike can work or relax in the tailored passenger space.
